BACKGROUND: Invasive plant management includes the removal of invasive plants from District lands to improve and conserve habitat quality. It is the most time-consuming task faced by District natural restoration crews and is a significant challenge to habitat conservation. Management of invasive plants is necessary to improve and conserve habitat quality and species diversity on District properties throughout Lake County. To more efficiently accomplish this work, each year the District hires contractors on an hourly basis to complete several projects to manage herbaceous invasive plants.

In order to undertake the critical work of follow-up invasive species control at sites where significant investments have been made in site restoration, the District advertised for bids for the Projects, which involve season-long control of invasive plants at Grainger Woods, Middlefork Savanna, Fort Sheridan, and Cuba Marsh, and for control of teasel (an invasive flowering plant) at several other preserves.

The Projects were advertised on March 20, 2024, and bids were received from five (5) bidders. Work is anticipated to begin in May and to be completed by December 2024. A summary of the bids received is listed below, with each low bid highlighted:
